VLM Workshop problem tree in meeting ClujNapoca 02/06/2015

Background: cocreation is a very important aspect in het Sagiter project, there is a good cooperation between the partners in the 6-monthly partnermeetings, but in between, there is a lack of cocreation. How is this possible and how can we improve this?

Aim: to find a strategy to arouse cocreation in the Sagiter project

Duration: 1h30

Facilitator: Sylvie Fosselle

Methodology: problem tree analysis

For each step we work in small groups of 4 people with 1 facilitator, after each step we do a quick plenary feedback and go to the next step.

1. Explain the subject, this is the frame of the exercise
2. Problem analysis:
 - Check the subject with the stakeholders
 - Make an inventory of the perceived problems, what are the causes of each problem?
 - And what is the effect of each problem?
 - Build the problem tree (hierarchy)
3. Objectives analysis:
 - a. Convert the problem tree into an objective tree
 - b. Check if it is feasible, if necessary reformulate objectives
4. Analyses of the strategy:
 - a. Divide the objective tree into clusters (clustering)
 - b. Select the clusters which will be included in the intervention
